

Internet Technologies Inc. OCTOBER 2004 NEWSLETTER

OUR WEBSITE SERVICES: If you visit www.fsames.com you'll find some new links right in the main menu. In the *TOOLS* section you'll find:

BUY AND SELL: a free online classified ad system that allows you to post ads with pictures and track users who look at it.

MESSAGES: is a posting forum where you can leave messages, post links or place a notice of your upcoming events in town. A hidden link is in here to our newest feature, *IMAGE GALLERY* where you can post an online photo album.

YELLOW PAGES: post your business for free, including links to your website and your e-mail address.

In the Menu's *VISITOR* section:

YELLOW PAGES is listed again for people outside of the Fort to find you.

OPPORTUNITIES: you can list businesses, real estate for sale, employment ads.

In the Menu's *QUICK LINKS* section

MAIL: links to *WEBMAIL*, a service just like Hotmail for our users. Use e-mail even if you're out of town, or at someone else's computer.

BANKS: direct links to the logons for our two in town banks and credit union.

In the *IN THE FORT* section:

LIDO THEATRE: download a printable movie schedule for the month.

DINING: download menus for in town restaurants and takeouts

ONLINE REALTY: for as little as \$25 you can list you property with photos!

In the *new TV SOCIETY* section:

SCHEDULE: link to today's program schedule, UHF or VHF

THEATRE LISTING: If you've wondered why the theatre listing on the front page is out of date, we can tell you you're using MS Internet Explorer. It *sucks*, it doesn't go on the Internet and get the newest page even if you click refresh! If you were using Firefox, you'd see the current listing. You could also block pop-ups, unwanted images and add many cool features like *TABS* (load & browse ten web pages and jump from one site to another. Shut them all down with one click), Google previews (see if it's a web page or photo in the listing) and more. Upgrade easy with another feature on www.fsames.com; *TOOLS* – *MEMBERS* – *FILE SERVER*, check *SOFTWARE*.

ADSL: If you've been considering high speed, you can use *MAX ADSL* without changing e-mail addresses or settings. Local service, local support, works the same. How good is it? We've had a dozen people switch *to* *MAX ADSL*, and *none* switch from it! The best serviced and most reliable high speed available in Fort St. James.

WIRELESS SERVICE EXPANSION: There's been a few glitches with our current wireless system as it has been *too popular*, and we're stuck waiting for new radio equipment to keep up with the demand. It is on its way and should be installed in a few weeks. In the meantime bear with us and be aware that we're installing stuff to fix current problems, allow expansion to a couple new areas, one of which is Pinchi Lake, and to increase the overall speed and reliability. If you are a wireless user, you can help matters right now by *decreasing the speed of uploads* on any music sharing programs, and *setting those programs not to start automatically* when you turn your computer on. **Also be aware** that we have received warnings (as have the other Internets) to **turn in your names** for downloading music, videos and pirated software from American software organizations and haven't because they weren't accompanied by a Canadian court order.
